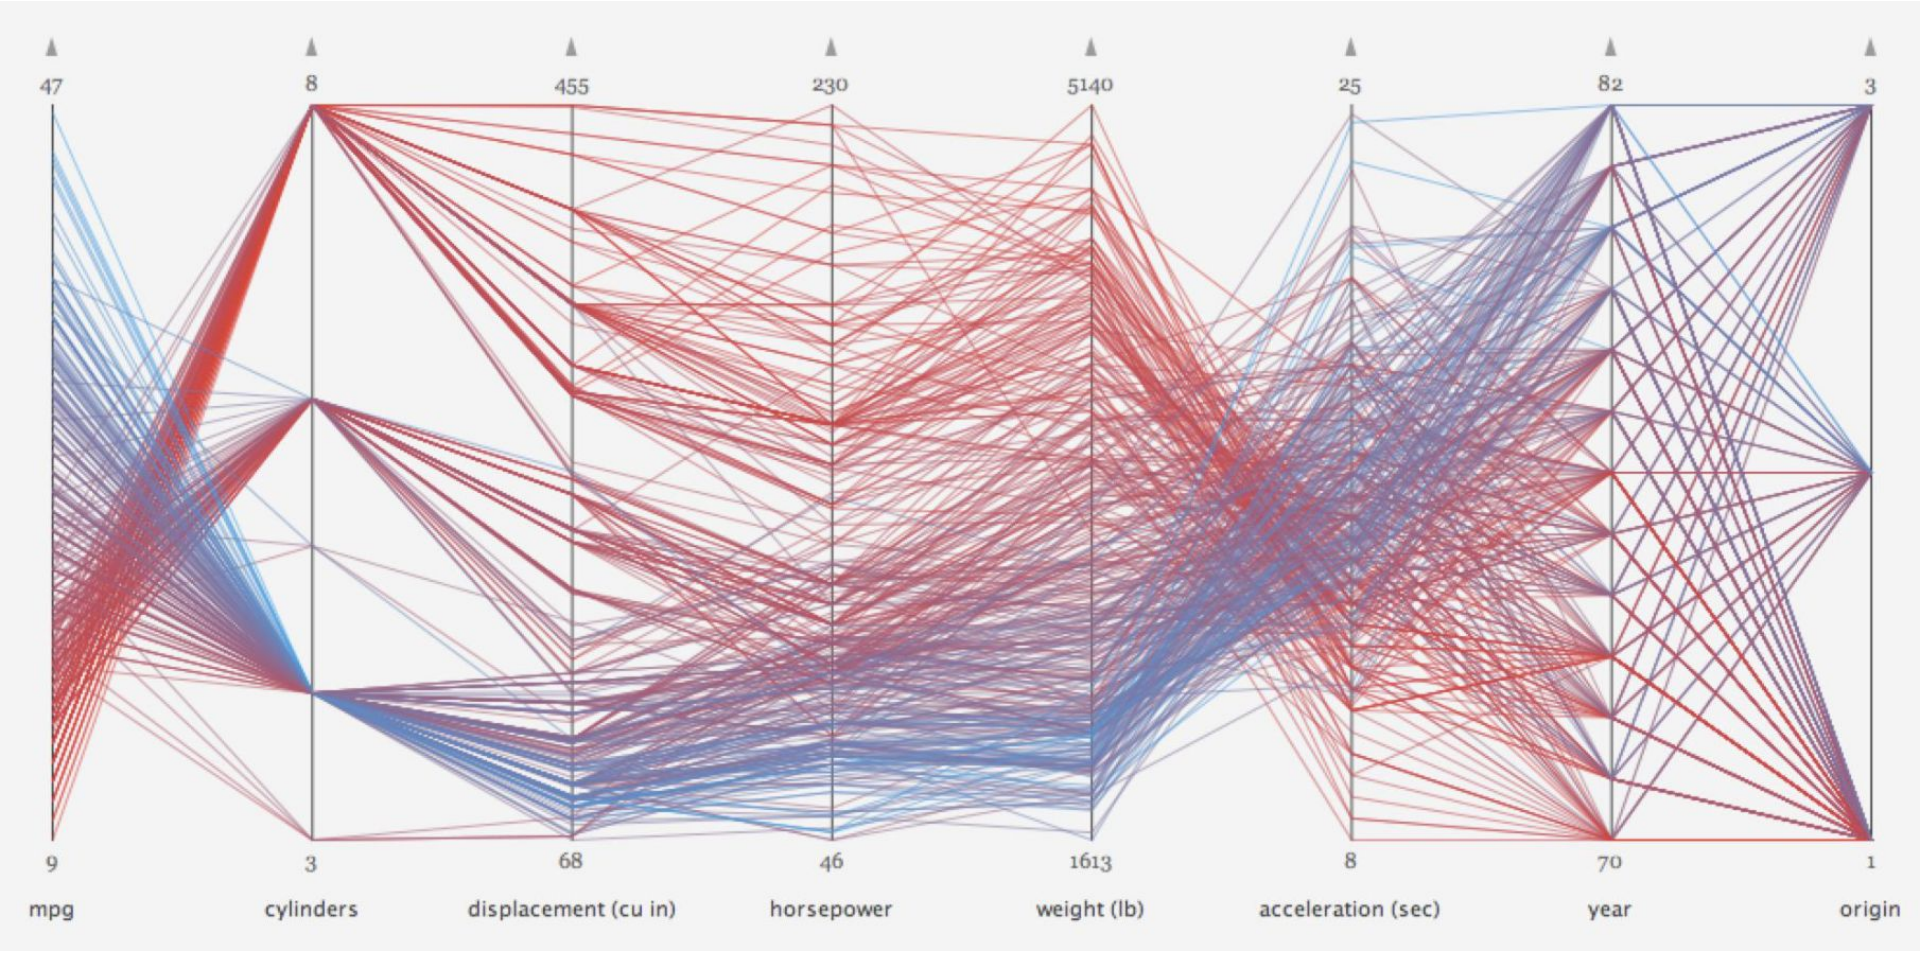
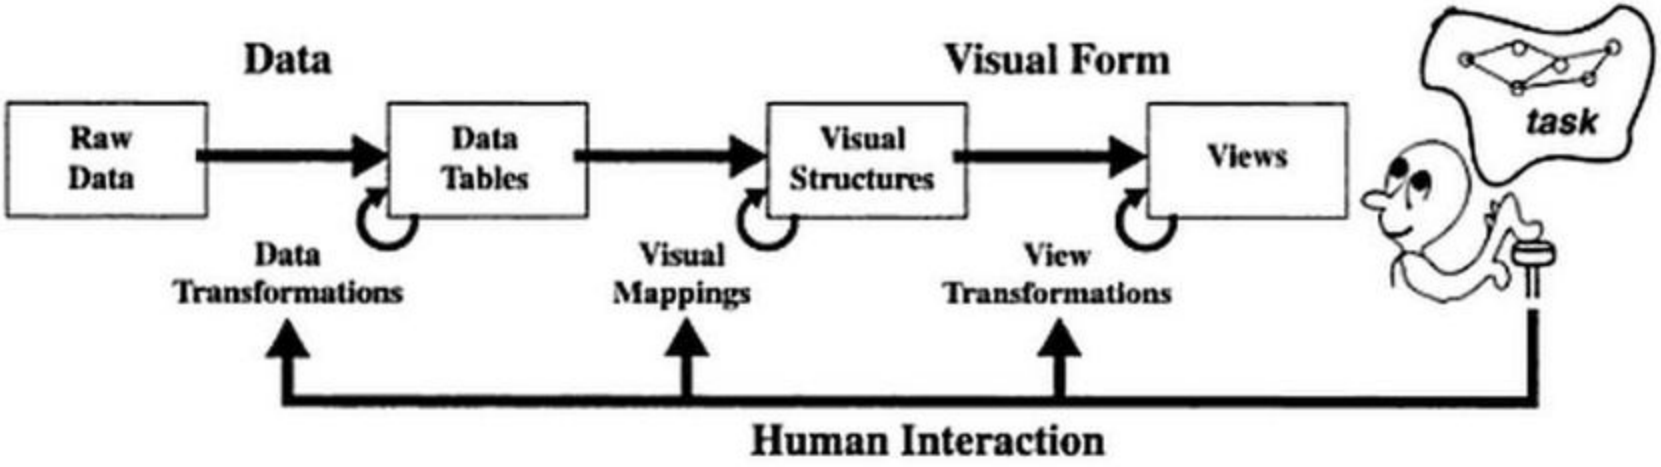
Why interaction?



Info Visualization Pipeline



Interaction

"features that provide users with the ability to directly or indirectly manipulate and interpret representations"

—

Yi, Ji Soo, Youn ah Kang, and John Stasko. "Toward a deeper understanding of the role of interaction in information visualization." *IEEE transactions on visualization and computer graphics* 13, no. 6 (2007): 1224-1231.

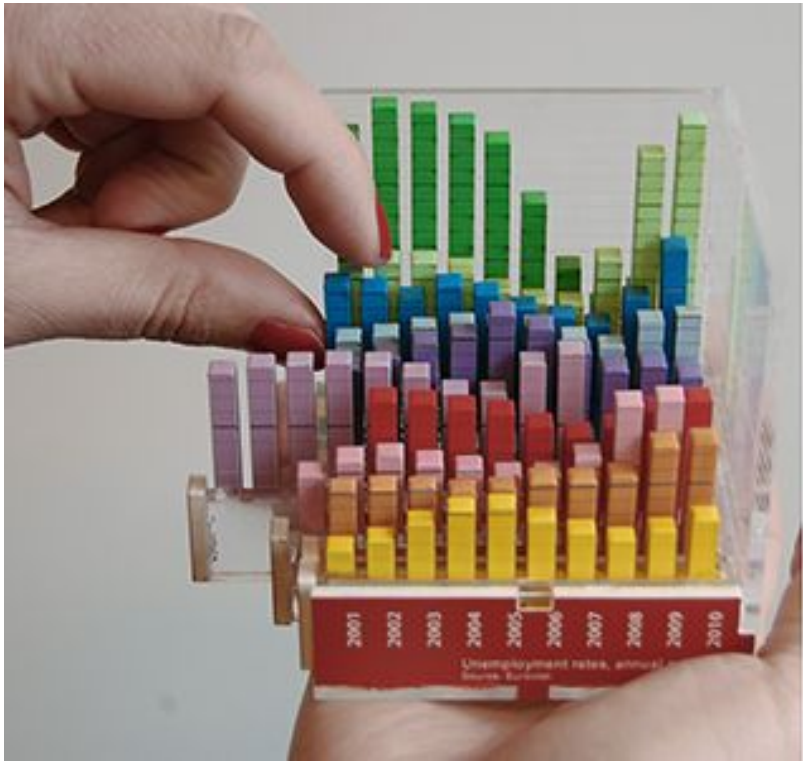
Data physicalization

Data Physicalizations



A data physicalization (or simply physicalization) is a physical artifact whose geometry or material properties encode data

- Active perception
- Depth perception
- Haptic senses
- Playfullnes and cognition
- Data in the real world

Jansen, Y., Dragicevic, P., Isenberg, P., Alexander, J., Karnik, A., Kildal, J., ... & Hornbæk, K. (2015, April). Opportunities and challenges for data physicalization. In *Proceedings of the 33rd Annual ACM Conference on Human Factors in Computing Systems* (pp. 3227-3236). ACM.

List of Physical Visualizations

and Related Artifacts

This is a chronological list of physical visualizations and related artifacts, maintained by Pierre Dragicevic and Yvonne Jansen. Thanks to our contributors. Feel free to post a general comment or if you know of another interesting physical visualization, please **submit it**!

This list currently has 327 entries. See recent additions. You can also get notified of new entries through Twitter.

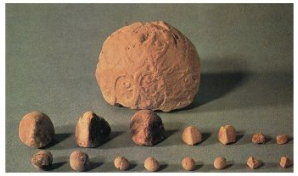
5500 BC – Mesopotamian Clay Tokens



The earliest data visualizations were likely physical: built by arranging stones or pebbles, and later, clay tokens. According to an eminent archaeologist (Schmandt-Besserat, 1999): "Whereas words consist of immaterial sounds, the tokens were concrete, solid, tangible artifacts, which could be handled, arranged and rearranged at will. For instance, the tokens could be ordered in special columns according to types of merchandise, entries and expenditures; donors [...]

2600 BC – Inca Quipus

Quipus were complex assemblies of knotted ropes that were used in South America as a data storage device and played an important role in the Inca administration. Only a handful of specialists could use and decipher them. Their meaning mostly remains a mystery but it seems that color, relative position of knots, knot types and rope length were used to encode categorical and quantitative [...]
